Subject: Please Sign the Agreement for Wind Produced Energy

Ms. Nickerson, Please provide a copy of the following letter to each of the PSC commissioners and enter it into the Public Comments record.

Arnetta McRae, Chair
Jaymes B. Lester
Joann Conaway
Dallas Winslow
Jeffrey Clark

As a resident of Delaware, I urge the above listed individuals, comprising the Public Service Commission, to approve the negotiated agreement for an offshore wind farm between Bluewater Wind and Delmarva Power and Light, that was submitted to the commission on 10 December 2007. I believe that this agreement meets all the criteria of H.B.6.

Please consider:

Wind power provides stable-priced energy. Coal and natural gas will have fuel price increases as well as expected carbon dioxide taxes.

With the newly negotiated price terms, wind power will be less expensive than the current price of energy.

By reducing the amount of carbon-based fuel burned for electricity, and thus reducing air pollution, the wind generators will improve the health of Delawareans and literally save lives, while saving an estimated \$750 million in health care costs.

By being the first state to have an off-shore, wind-generated, energy producing installation, Delaware will not only create jobs for this one installation, but will develop skills and business expertise in an industry expected to continue growing rapidly.

Because of Delaware's huge wind resources (five times greater than our electric use), this first installation would give us the experience to decide if we want to encourage this as a major growth industry for the state.

Wind power will not add to the greenhouse gas emissions now dangerously heating our planet.

Very truly yours,

Janet S. Strickler

Subject: Power Purchase Contract - support as negotiated.

Karen - please pass this to the Commission. Rob

Dear Public Service Commission:

I support the power purchase contract negotiated between Blue Water Wind and Delmarva Power. I do not want to see this drag on any longer.

The contract indicates wind power will cost 9.893 cents/kWh and that my last Delmarva bill showed I am paying about 11 cents/kWh. So the price of wind electricity is roughly what we are paying *now* for dirty power. And this does not take into account the \$750 million in health cost savings from the wind farm. It also assumes that natural gas will cost the same in 30 years as it does today, and that carbon taxes will be modest over the next 30 years.

Please vote to ratify the contract as negotiated and help make Delaware the First to build a wind farm.

Thanks for your support,

Rob & Donella Gano

Subject: Remove the Danger to Sussex residents

Dear Ms. Nickerson, please use your position to move the re-vised contract between Delmarva Power and Blue Water to completion.

I'm convinced that the nodules in my lungs which have cost Blue Cross thousands in treatment and reduced lung capacity for me have been as a result of the coal fired pollution from the Indian River plant. Wind power can eliminate that.

When I was an active farmer, we could tell when the wind had shifted from the southeast as the leaves of our 1200 acres of lima beans would be spotted and damaged by sulfur and other pollutants from Indian River. Wind power can eliminate the resulting crop damage and reduced yields.

And how many more coal miners must die to dig out a product that can be replaced by wind power ?

Please push for the adoption of wind power, it will be the best thing this state has done in many decades.

Thanks, Hugh Martin, 2350 Bay, Lewes

Bluewater Wind has developed a new contract that is fair, economically friendly, and sincere. I beseech the PSC to accept this contract and let's start using the terrific winds of Sussex County to our benefit.

Subject: Bluewater Wind Proposal

Dear Ms Nickerson,

I urge you to support the proposal to construct the 150 turbine wind farm off Rehoboth Beach, DE and get this contract finalized now. Too much time has passed already.

We need alternative energy sources like this to help reduce our dependence on fossil fuels, improve air quality, (which in turn will improve the health of our citizens), and to help provide stable energy pricing in the future.

I have been very impressed with Bluewater Wind's willingness to compromise on their proposal, and at the same time, have been extremely disappointed in Delmarva Power's blatant attempts to thwart the process. Delmarva Power's conduct is outrageous and insulting to any fair minded person.

Please do the right thing. Support the wind farm and get this contract signed immediately.

Sincerely,

Michael E. Quinn

Dear Ms. Nickerson:

We are two retirees in Lewes. We wish to support in any way the installation and use of 'Windpower'. Its time has come that every conceivable environmentally healthful technology should be called on----taxes not withstanding. The earth is in trouble, and we are the problem. Thank you for you work and service to us citizenry.

Subject: DPL and BWW Power Purchase Agreement

Ms. Nickerson please forward this comment to Ms. McRae, Chair and all PSC members and to Controller General, Director OMB and To Secretary DNREC. Additionally, please file in the public record of the Delmarva Power RFP.

We are very pleased that Delmarva Power(DPL)and Bluewater Wind (BWW) have found common ground in the Power Purchase Agreement. BWW has come through once again to renew and reinforce its committent to Delaware citizens to provide electricity generated from a clean, renewable, efficient and price-stable energy source.

In the many months that have passed since the PSC and the other agencies designated as deciders ordered DPL to negotiate with BWW, the case for BWW has only grown stronger.

We respectfully request that you vote YES for the Bluewater Wind contract with no further delays when the Power Purchase Agreement issue is before you on December 18th.

Thank you,

Thomas E. and Patricia W. Frey

Subject: For Wind Energy

Dear Ms. Nickerson,

It is absolutely critical that the Public Service Commission members and other deciding agencies support the offshore wind energy project as it comes before the Commission on December 18. I urge you to instruct Controller General Larson, as our representative to these proceedings, to **vote in favor of the Power Purchase Agreement** released on Monday. Difficult decisions require strong leadership. It is time for the people and not fossil fuel corporations to take control of our energy future.

Sincerely yours,
Beebe Frazer

Subject: support wind energy

Dear Ms. Nickerson,

We urge the State of Delaware to support the Bluewater wind energy project.

With global warming proceeding at an unprecedented rate, and population increasing in Delaware, we NEED to support clean, renewable energy.

Pennsylvania is allowing citizens to voluntarily pay more for wind energy. We support many environmental causes and would gladly pay more for clean energy (and pay for more subsidies for low-income residents).

We saw many wind farms in Denmark and the Netherlands, and found them very attractive and progressive. We hope that Delaware will join suit.

I am against the wind farm off the coast of Delaware. The cost of building and maintaining the wind farm and the amount of power generated does not seem to be cost effective. It has not been successful in other areas. I am sure Bluewind to get this contract is saying a lot of things but when it is started will certainly raise the amount it will take to build it. People have said they are willing to pay more for their power, but they are usually people who can afford it and will they be willing to pay for those who can't?

We have made our land ugly why do we want to do the same off the coast. The turbines will not be what I want to look at when I look at the ocean.

If we want a wind farm why not do it on the land?

I hope this project is scrapped. Those who are for it have a great voice and the Cape Gazette has been biased for the farm.

Thank you for allowing me to have my say in this matter. Carolyn Wissinger, Lewes, Delaware

Subject: Approve Bluewater Wind Power Purchase Contract

Dear Karen Nickerson,

I am writing to urge approval of the Bluewater Wind Power purchase contract. Just yesterday I attended a Climate Change Conference at the Marine Studies campus of the University of Delaware in Lewes. The latest climate change data and analysis by world-class scientists focused on the dramatic and disastrous impact on the state of Delaware if we fail to act immediately to reduce our carbon emissions by such measures as developing non-fossil fuel energy sources. Moving forward with Bluewater Wind Power would be a vital first step in becoming less reliant on fossil fuel for energy production.

Thank you,

Rev. Dorothy P. Greet
